The New SDBM Data Model

The SDBM captures manuscript observations as described in various sources, linking observations about the same manuscript to create a history of that manuscript’s description and provenance across time and place.
The SDBM isn’t actually a database of manuscripts, it’s a database of observations about manuscripts. It ingests information from auction catalog from auctions, booksellers, and private collections; census and inventory data; personal observations from users
The SDBM gathers data from various sources that describe manuscripts.
The SDBM **DOES NOT** own any manuscripts.

The SDBM **DOES NOT** make any objective claims about the reality of a manuscript’s descriptive characteristics or provenance history. The SDBM reflects what its **Sources** record about the manuscripts.
SDBM Data Model

• **Sources** describe manuscripts, such as auction catalogs, bookseller websites, etc.

• **Entries** represent observations of manuscripts derived from a **Source**. For example, a single lot from an auction catalog is one Entry.

• **Manuscript Records** link together **Entries** that describe the same manuscript. This linking node gathers observations about the same manuscript across time and place for easy reference and study.
SDBM Authority Files

Authority files standardize spelling and naming conventions to optimize search results and provide a mechanism for linking to outside resources

- **SDBM Names**
  - Governs the following fields: Authors, Artists, Scribes, Provenance Agents
  - Links to VIAF
  - Links to SDBM Place Authority Files when a nationality or related location is known

- **SDBM Places**
  - Governs the Place (of composition) field
  - Links to Getty Thesaurus of Geographic Names, GeoNames, or VIAF
  - Provides coordinate information for known locations
  - Links to SDBM Name Authority files that relate to that location

Manuscript Record
Source

• Information resource about manuscripts:
  – Auction/Sale Catalogs
  – Private Collection Catalogs
  – Online-only Auction and Bookseller Websites
  – Other Published Sources
  – Unpublished Sources
  – Personal Observations
Sources, cont.

• Each **Source** in the SDBM has its own ID number.

• Each **Source** links to every entry derived from it in the database.

• Click on any SDBM_SOURCE_ID number while in the database to view data related to that **Source**.
Entry

- Observation about a single manuscript as described in a **Source**
- Repeats verbatim the information recorded in its Source
- Each **Entry** has its own SDBM_ID number
- **Entries** about the same manuscript can be linked together. These links are what make up a **Manuscript Record**
Manuscript Record

• **Entries** that describe the same manuscript are linked together via the **Manuscript Record**.

• The **Manuscript Record** displays a composite provenance list derived from the linked entries. From here, you can determine current location and provenance, create your own **Personal Observation**, or leave a comment about the manuscript.

• Click on an SDBM_MS_ID number in the database to open that **Manuscript Record**.
The Data Model in Action:

Source
Source Title: The Beck Collection...
Source Date: 1997-06-16
Selling Agent: Sotheby's

Name Authority
Schoenberg, Lawrence J., 1932-2014

Entry
Lot 3
Author: Aristotle
Place: Central France

Place Authority
Sarasota

Source
Source Title: Transformation of Knowledge...
Source Date: 2006
Institution/Collection: Schoenberg, Lawrence J., 1932-2014

Entry
LJS 101
Author: Aristotle
Place: Saint-Benoit-sur-Loire

MS Record (SDBM_MS_138)
